

MFBO - Multi Fuel Bread Oven from Burundi / East Africa

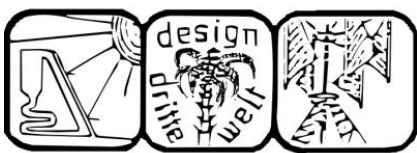

US-AID/ Burundi Community Stove

PDI-Family Cooker

WHO Vaccine Cold Box, Pakistan

**design + engineering  
south countries**

We are an international group of industrial designers who works on the development of technical products for SOUTH COUNTRIES.

For this reason our work is based on methods of APPROPRIATE TECHNOLOGY, SUSTAINABLE DEVELOPMENT & SOCIAL ENGINEERING and it is our aim to develop products tailored to the user's needs in respect of function, manufacturing costs and acceptability.

We worked on projects in the following fields: ENERGY-SAVING PRODUCTS, BIO-COAL BRIQUETTS, BIO-MASS STOVES, SOLAR-SYSTEMS, FOODSTUFF STORAGE, TECHNICAL EQUIPMENT for MEDICAL PURPOSES, etc.

Central to our work is the thought that products and values developed in the WEST over a period of many decades, cannot simply be transferred to SOUTH COUNTRIES, because these products do not meet their real requirements but often worsen their social situation.
